Junior Python Developer

Some of your responsibilities as a Junior Python Developer will be:

- Write the program codes
- Produce detailed specification
- Test the product / solution in controlled real situations before going live
- Support, maintain and document software functionality

What we look for and will NOT compromise on:

- You worked on & delivered Python projects to the production.
- You write tests. A lot of them.
- You are proficient with most parts of our stack (doesn't have to be complete): Python, Django, Heroku, AWS (mostly Beanstalk, S3, RDS), REST, Celery, Redis.
- You are comfortable picking new tools on the go (occasional serverless, k8s, GCP, node.js).
- You are a great writer, both for asynchronous communication & content creation.

- Knowledge in data structure, algorithms and databases.

- Basic knowledge in HTML 5, JavaScript and CSS 3

What we will value but NOT insist on:

- (Huge bonus, but not necessary) You feel comfortable publishing blog posts on our blog under your name.
- (Huge bonus, but not necessary) You are an active YouTuber or open-source contributor.

What do we offer?

- Fully remote work with an emphasis on autonomous & asynchronous schedules.
- Flexibility of your schedule and engagement. We are 100% performance-based.
- We commit to writing the cleanest code possible.
- We strive to keep documentation from other projects to learn together.
